

## HIGH INTEGRITY VALVE REGULATED LEAD ACID RECHARGEABLE BATTERY

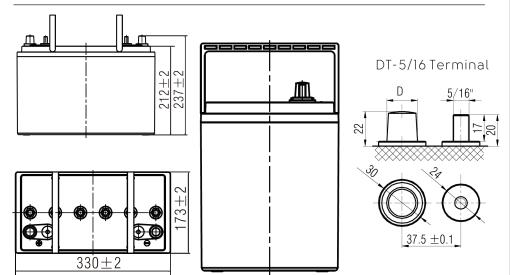

## Specifications

12v
118AH
330mm
173mm
212mm
237mm
31.7Kg
-A (5 Sec)
ABS UL94 HB Material
-mΩ
Less than -A
130 AH (100hr, 1.75V/cell, 25°C/77°F) 118 AH (20h,1.75V/cell 25°C/77°F) 113 AH (10hr, 1.75V/cell, 25°C/77°F) 107 AH (5hr, 1.75V/cell, 25°C/77°F)
0~40°C (32~104°F ) -15~50°C (5~122°F) -15~40°C (5~104°F)

## Charge retention (shelf life) at 20°C (68°F)

•	•	•	•	•
1 month				97%
3 months				91%
6 months				85%

## **Dimensions**

## **FEATURES**

- Deep cycle AGM technology
- Plus carbon technology
- Lead calcium grids for extended life.

#### Sealed Construction

Sterling's unique construction and sealing technique ensures no electrolyte leakage from case or terminals.

## Electrolyte Suspension System

All HPC series batteries utilise Sterling's unique electrolyte suspension system incorporating a microfiber glass mat to retain the maximum amount of electrolyte in the cells. The electrolyte is retained in the separator material and there is no free electrolyte to escape from the cells.

## Control of Gas Generation

The design of HPC series batteries incorporates the very latest oxygen recombination technology to effectively control the generation of gas during normal use.

## Terminals

Sterling's HPC series batteries are manufactured using a range of terminals which vary in size and type. Please see diagram opposite.

## Valve Regulated Design

The batteries are equipped with a simple, safe low pressure venting system which releases excess gas and automatically reseals should there be a build up of gas within the battery due to severe overcharge. Note. On no account should the battery be charged in a sealed container.

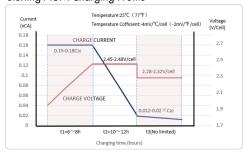

# HPC115-12DT

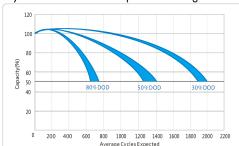

HIGH INTEGRITY VALVE REGULATED LEAD ACID RECHARGEABLE BATTERY

## Charging and Discharging Information

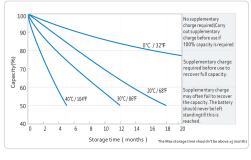

## Sterling AGM Charging Profile

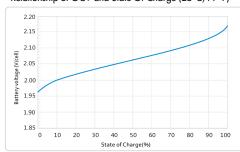

### Cycle Life in Relation to Depth Of Discharge

## Self-Discharge Characteristic

#### Relationship of OCV and State Of Charge (25°C, 77°F)

## Charging (25°C/77°F)

Standby use: Float charging voltage 13.5V to 13.8V. (Temperature compensation recommended)

Cyclic use: maximum charging current (see front page). Charging voltage 14.4V - 15V.

Top charge: Product in storage (ambient temperature) required a top charge every 6 months at 25°C (77°F). For higher temperatures, time intervals will be shorter.

## **Discharge**

Stop operation when voltage has reached the minimum permissable voltage; recharge immediately.

#### Storage

Always store battery in fully charged condition.

Store batteries in a dry and cool location.

## **Temperature**

For standby use, batteries should be kept in an ambient temperature of 25°C.

#### Caution

- Do not short circuit
- Do not charge in a sealed container
- Service life and operational characteristics will be effected by temperature
- AC ripple reduces service life

## **Applications**

- Renewable Energy Marine Uninterruptable Power Supply (UPS) Electric Power System (EPS) Emergency Lighting
- Railway/Aircraft Signal Alarm & Security System Electronic Equipment Communication Power Supply
- DC Power Supply

## **Head Office**

Unit 17, M11 Business Link,

Stansted, Essex,

CM24 8GF, UK
